

Table of Contents

Foreword 8

Introduction 9

1 Practical demonstrations of the ‘skin-gut axis’ 12

- Case study: Chronic atopic eczema 13
- Case study: Acne 15
- Case study: Seborrheic eczema 16
- Case study: Painful cysts in breasts 18
- Case study: Swollen fingers due to roundworms in the intestine 19
- Case study: Irritable bowel syndrome and gluten intolerance 19
- The power of your thoughts and the ‘brain-gut axis’ 21

2 The skin 24

- Functions of our skin 25
- The skin as ‘observer’ 27
- The layers of the skin and what happens within them 28
- Fascinating facts about skin flakes 34
- Various influences on the skin 34

3 Tight junctions: the connections between cells 36

- Tight junctions in the intestines, zonulin and gluten 37
- Tight junctions and the role of our microbiome 38
- Tight junctions in the skin and disruptive triggers 39
- Tight junctions and pharmaceuticals on the skin 41

4 Skin parameters 42

- Transepidermal water loss (TEWL) 42
- Natural Moisturising Factor (NMF) 43
- The hydration state in the horny layer (Stratum corneum) 44
- Vitamin D in the skin 46
- Calcium and calmodulin in the skin 47
- Body temperature as a skin parameter 48
- Sweat 49
- Sebum and sebogenesis or the origin of sebum 51
- Summary on sebum 61

5 The skin’s acidity or skin pH 63

- The terms ‘acidity’ and ‘pH-value’ explained 64
- When is something of acidic? 66
- The acidity in and on our body 66
- The bodily function of acidity 69
- Help, I’ve gone sour... am I a sourpuss now? 70
- The acid mantle of the skin 72
- The acidity of the skin 72
- Summary of the skin’s acidity 89

6 The development of skin before birth 90

‘Normal’ delivery versus ‘C. section’ 90
Vernix caseosa: that greasy protective layer at birth 90
Skin development in premature babies 92
Snot, poop and urine on baby’s skin 92

7 The human microbiome 93

Concepts regarding the microbiome 93
Skin microbiota & gut microbiota versus ‘skin flora’ & ‘gut flora’ 94
Kinds of microbiome 95
So what exactly is our microbiome? 96
Classification of microbes: domain, phylum, class, etcetera 96
Scientific writing guidelines for describing microbes 97
Why is our microbiome so important? 97
The human microbiome: ‘from mouth to anus’ 97
The origin of our microbiome 98
Birth: vaginal delivery versus Caesarean section 98
Variations in composition of human microbiomes 100
Microbes we pick up from our environment 101
Microbiome in couples 102
Dog and owner as lookalikes, more than you think 103
Zoonosis: transfer of microbes from animal to human 103
The microbiome and the ‘restaurant hypothesis’ 104
Resident, transient and opportunistic microbes 109
Hazards for our microbiome 113
Prebiotics and probiotics for our microbiome 115

8 The skin microbiome 121

The functions of our skin microbiome 121
Composition of the skin microbiome 122
Skin microbes and their favorite environment 127
The resident skin microbiota 130
The resident skin bacteria 130
The transient, temporary, or passing microbes 137
Vectors 141
Parasites on the skin 142
Viruses 151
Fungi and yeasts 152
Cases on disturbed skin microbiome 159
Microbiome dysbiosis in skin disease 161
Hygiene and skin microbes: sensible or rather not? 165
How to maintain the stability of your healthy skin microbiome? 166

9 The immune system 168

The innate and acquired immune system 169
The lymphatic system 169
The lymphatic system of our mucosal surfaces and skin 173
The mucosal immune system (MIS) 174

10 the immune system of the skin 183

Keratinocytes (epidermal cells) 184
Antimicrobial peptides in the skin 184
Antimicrobial peptides in the sebaceous glands 185
Complement, another mechanism to attack bacteria and viruses 185
Antigens 186
Antigen Presenting Cells (APCs) 187
Mast cells (MCs) 190
Signal molecules 193
Fibroblasts 198
T helper cells (Th) 199
Receptors 200
Sports and our immune system 202

11 The immune system and our microbes 203

The interaction between the immune system and our microbes 204
Communication amongst microbes 205
Biofilm 208
Factors unfavourable for our skin microbiome 209
Immune system educated by microbes in asthma and allergies 210

12 Skin- and intestinal microbes in health and disease 211

‘To be ... or not to be’ that’s the question for a pathogen 211
How does skin fall ill from within? 213
From first line of defense to second line of defense 213

13 The gut microbiome 217

Fungi and yeasts in the intestines 219
Parasites in the intestines 220
Intestinal parasites and the consequences for the skin 224
Microbiota and urticaria (nettle rash, hives) 229

14 The intestinal immune system 231

First line of intestinal defense 233
Second line of intestinal defense 234
Lamina propria 235
Antibiotics versus antimicrobial peptides (AMPs) 235
Secretory immunoglobulin A (sIgA) 236
Interaction between immune system and gut microbes 239
Short-chain fatty acids (SCFAs) for mucosal health 239
Zonulin and tight junctions (TJs) in the intestines 240
Gluten-free diet: sensible or bogus? 242

‘The amazing world of the skin-gut axis’ by Marcelline Goyen BHs © 9-2024
‘including the role of the microbiome’

‘Leaky gut’ 244

How to recognise a leaky gut? 245

Virulence factors in our intestines 249

Intestinal diseases relating to skin ailments 251

15 Immune responses in food allergy 261

Biogenic amines, histamine and histamine releasing substances 264

Hives, urticaria and strawberries 267

Food allergy and the ‘restaurant hypothesis’ 268

Food allergy and the skin microbiome 271

Food allergy and the intestinal microbiome 272

Food allergy, IgE and gut bacteria 273

Food allergy and the role of a healthy diet and vitamins 273

Food allergy, food hypersensitivity and vitamin D 274

Food allergy and short-chain fatty acids (SCFAs) 275

Cutibacteria and short-chain fatty acids (SCFA’s) 277

How SCFAs affect the skin health 278

16 Talking about poop, how fun and meaningful is that? 279

What story does poop tell about its producer? 280

The ‘poop scale’, also known as the Bristol stool chart 282

Concluding poop remarks 288

17 Stressors in the immune system 289

Stress and ‘freeze, flight or fight’ 290

Free radicals 292

ROS and oxidative stress 294

NO and Nitrostress in the skin barrier 298

UV radiation 300

18 Antioxidative defense 307

Free radicals versus free radical scavengers 307

Antioxidant vitamins 308

Endogenous antioxidants 308

Flavonoids 318

Carotenoids 319

Minerals and trace elements 319

Omega-3 and krill oil 324

Sun protection through diet and food supplements 325

19 Generic ‘skin-gut’ recommendations 328

20 Challenges in skin diseases 335

Acknowledgements 337

Bibliography 338
